5. Not a Spectator Sport....

For me the most challenging endeavor out of *12 key to Success* is "**Not a spectator sport**". Classrooms, plural sights , reading articles etc. are essential but the most important part of becoming an expert on coding is by coding.

I believe my work will help me to discover more on the technologies I learn from the bootcamp. I work in a platform where I have an opportunity to explore javascript, NodeJs, Angular, Python, MongoDB, MariaDB, etc.

As my company/work is more focused on automation efforts and adapting DevOps Agile model, I will jump into every opportunity to get my hands dirty and instrument the solutions though the technology I learn in the bootcamp.

Apart from that, I request to give other options to work on non-mandatory practice assignments that we can on our free time or after the bootcamp course.
